

Out of the Question.

"Wouldn't your Majesty like to take out some life insurance?" respectfully asked the agent, on being admitted to the royal presence.

"I can't afford it," replied King Solomon. "It's about all I can do to look after my family while I'm alive."

Waving his hand to signify that the interview was ended he turned to the speaking tube and ordered his steward to provide 300 porter house steaks and 700 veal cutlets, breaded with tomato sauce, for the family dinner.—Chicago Tribune.

Demand for More Battleships.

The Secretary of the Navy has demanded more battleships, and there can be no doubt that Congress will consider his recommendations. Protection of our sea ports requires, and fortifications will not adequately supply this. Defense against all disorders of a malarial type is, however, adequately afforded by Hostetter's Stomach Bitters, an efficient remedy, also, for constipation, biliousness, dyspepsia, rheumatism and nervousness.

The dust of charcoal is gathered up and mixed with the chaff from wheat, barley and other grains, and with chopped straw, in Japan. It is then moistened into a paste, rolled into balls as big as a billiard ball, and makes excellent fuel.

To Cure a Cold in One Day.

Take Laxative Bromo Quinine Tablets. All Druggists refund money if it fails to cure. 25c.

It would keep half a dozen harvesting machines busy gathering in the crop of wild oats sown by some young men.

Chew Star Tobacco—The Best. Smoke Sledge Cigarettes.

A cheap watch is usually in sympathy with the eight hour movement.

A Prose Poem.

EE-M. Medicated Smoking Tobacco and Cigarettes. Are absolute remedies for Catarrh, Hay Fever, Asthma and Colds; Besides a delightful smoke. Ladies as well as men, use these goods. No opium or other harmful drug used in their manufacture. EE-M. is used and recommended by some of the best citizens of this country. If your dealer does not keep EE-M. Send 10c. for package of tobacco and 6c. for package of cigarettes, Direct to the EE-M. Company, Atlanta, Ga. And you will receive goods by mail.

STATE OF OHIO, CITY OF TOLEDO, ss.

LUCAS COUNTY. FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & CO., doing business in the City of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of CATARRH that cannot be cured by the use of HALL'S CATARRH CURE. FRANK J. CHENEY. Sworn to before me and subscribed in my presence, this 6th day of December, 1900. SEAL A. D. 1886. A. W. GLEASON, Notary Public.

CONSUMPTION

AN ARCTIC STOREHOUSE.

CACHES ARE THE RELIANCE OF EXPLORERS FOR FOOD.

How They Are Built and Filled with Provisions—The Inviolability of Caches at the Natives' Hands—Sometimes They Cannot Be Found Again.

As more and more news comes piecemeal from the Arctic regions, and each new detailed map of the world has fresh lines and names put upon it in the nearly blank spaces marking the frozen zone, there is not a little interest felt in those primitive, temporary structures of the explorer, without which a trip in the icy wilds would seldom be possible—the caches of the North. The books, the magazine articles, the lectures of the explorers of fame, rarely do more than casually mention these storehouses of their expeditions, and thus few realize the part the caches play in Arctic work. And still less is known of their actual construction.

Unlike other monuments of civilization and exploration, says the New York Tribune, they leave no sign behind them when once they have ceased to be of practical use. A heavy fall of snow or a windstorm comes and tears their last remnants to pieces. Peary was unable, on retracing his steps, on one of his Greenland journeys, to find several of the caches he had carefully established and plainly marked. Snowstorms and gales of wind had obliterated every sign of them, and no amount of searching was of avail. Had the Peary party at this juncture not happened to fall in with plenty of game starvation would have been certain.

A cache is an Arctic storage warehouse made to keep provisions in until they are wanted. The word is the French word cache, meaning simply a hiding-place. A hiding-place is precisely what it is, for while men are not to be feared on the score of theft in the Arctic lands, animals of all sorts are. The great white bear that abounds in these regions will readily sniff out food, and any supplies left behind need to be hermetically sealed.

Thus the cache is the first outpost of civilization in the far North. When the Hudson's Bay region was being traversed and explored for the first time, caches were set up everywhere. Now, the region being a fairly well-known land, permanent supply posts in the form of tiny villages, of perhaps but two or three buildings, have been established, and men are to be found settled there the year round.

The great Northern belt of the land of perpetual ice circling the Pole has, however, none of these permanent settlements, though year by year the Danish government is planting new supply villages still further north on the snowy coasts of Greenland. These Danish villages are intended primarily for the benefit of the Greenlanders, but no explorer is ever turned away from their hospitable doors.

Once beyond the last of these villages an exploring party must plan its own food supplies. This it does by establishing these caches along its line of march. An Arctic expedition moving overland practically always intends to return by the same route. Even in these days of compressed foods, the weight of several months' provender for a large party is considerable. In caches it is, therefore, stowed along the route several days' journey apart.

What is simply a hole in the ground is first dug, a matter of extreme difficulty at times. Then, painfully digging elsewhere, earth is brought to the surface, and a quantity of this is dumped into the hole. Ice is melted and the water from it poured upon the earth, the entire mixture freezing in a few moments into a compact mass. This is the bottom of the cache. On it the provisions the party want to put aside for a future day are laid, so many pounds for each man, carefully calculated. There should be just enough to support life comfortably until the next cache is reached on the return, with two or three days' rations over for emergencies.

With stones, ice and snow the walls of the cache are now built up, water being poured over the snowy structure hermetically to seal it. It is a point of honor, among even the poorest natives, not to rifle a cache unless in cases of the direst necessity; but the provisions must be kept safe from the bears. Properly built the structure is impregnable, and it needs the work of pickaxes to tear it open.

It is marked by anything that the explorers can spare or find in the vicinity, generally by a staff of wood. In Siberia the tooth of a mammoth is not infrequently used. Despite this precaution, however, many caches can never be found again.

If rendered provisionless in this manner, the party must resort to its guns and hunt for the musk ox, the white bear and the seal, which sometimes are in easy reach, more frequently not to be found at all. Game in these regions is never to be depended upon.

Though the Bible is the most widely translated of all books, it is said that there are still 300 languages into which not even fragments of it have been done.

WHIRLING MICE.

Strange Little Creatures That Dance Like Howling Dervishes.

There are in the animal world species that imitate very many of the actions of humanity in all its activities. There are the snakes which the Indians of the Southwest call "flagellantes," from their strange imitation of actions of religious enthusiasts who beat themselves with rods—which the snakes do not do, by the way. There are eels gifted by nature with electrical powers and mantis spiders which remind one for all the world of preachers in their desks.

Strangest of all these animal freaks, perhaps, are the whirling mice of Japan. Although these delicately organized little creatures can never have seen the dancing Dervishes of Mahometan countries, yet in the peculiarity from which they receive their name they show a decided similarity to those holy men of Islam. The Dervishes spin noiselessly about, with eyes closed and rapt expressions, never touching each other either with their outstretched arms or their swelling skirts.

The mice, similarly, will, when stimulated to their favorite diversion by good food and freedom from fear, whirl about, balanced on their hind legs, for hours at a time. Sometimes naturalists will catch one of the dancing mice when in this condition, and forcibly restrain it from whirling. The body of the little creature trembles with impatience. Were its strength not so slight it would struggle to free itself, but the attempt would be in vain. When released, away goes the mouse whirling as madly and merrily as ever, as if it were wound up. And to carry out the figure, it will continue to whirl until the most complete exhaustion follows. While in the whirling mood the mouse seems not to fear anyone or anything, but to be absorbed in its whirling. It is as if it were attacked by some strange nervous disorder like St. Vitus' dance, which forbids the body to be still for a moment until the paroxysm has passed. For centuries the Japanese have found amusement in capturing these strange little beings and watching their antics. Native scientists are now studying the whirling mice.—New York Journal.

Water's Good Effects.

Dr. Austin Flint, Sr., used to say: "Plenty of water, plenty of water outside and in for health."

Since his day doctors generally have more and more strongly recommended water drinking, till now a certain (and large) number of glasses of water per day is one of the most familiar prescriptions from some of the best doctors at the best sanitariums in the land. High authorities now tell us that often the basis of success in the hot-water craze and in drinking mineral waters is neither the heat nor the minerals, but the water; the water is what the system of the patient was needing.

We are taught now that there is no danger of drinking too much water, and a good deal of not drinking enough. Of course, that is not disputing the fact that it is very easy to drink too much ice water when we are warm, and too much of any kind with our meals.

A practitioner and instructor at Bellevue recommends every one to drink a pint of water on getting up in the morning and a pint on going to bed, at any temperature they like; this is a hygienic suggestion, not a medical one; this very successful practitioner thinks it is the best way of giving the system needed liquid, and declares many irregularities disappear under this regime. The water, mind, is not, however, to be gulped down at one or two draughts; a half-hour or more while dressing or undressing should be given to sipping two glasses.

This same physician recommends a good drink of water when we feel tired or faint; in that state that generally makes us turn to tea or coffee or wine, the water has an almost equally reviving effect, and much better results in the long run.—Chicago Record.

Ice More Slippery Than Glass.

Ice has the property—peculiar to bodies which expand on freezing—of liquefying under pressure and solidifying again when the pressure has been removed. Consequently the weight of any body moving upon a sheet of ice causes the formation of a thin layer of water which separates it from the ice, and thus, by reducing the friction to a minimum, enables it to move slowly over the surface—i. e., makes the ice more "slippery." On glass, on the contrary, this liquid medium is wanting, so that the two solid and unyielding bodies come into actual physical contact, causing a friction which, in spite of the smoothness of the glass, considerably retards the motion of the body. If two smooth sheets of glass be taken and a few drops of water sprinkled over the one and the other placed above it, a thin layer of water will be formed, and until this layer has been pressed out the upper glass will move on the other as smoothly as if on ice. This peculiar property of ice is due to the effect of pressure in lowering the freezing point of water, so that whenever ice is subjected to great pressure it partially melts.

An Afflicted Mother.

From the Times, Paw Paw, Ill.

A resident of this town who has lost two children during the past six years, by violent deaths has been utterly prostrated by the shock, and seriously sick as a result of it. One child (aged 9) was killed by a cyclone in 90 while at school; another, three years later was run over by a Burlington R. R. train. That grief and misfortune may so prey on the mind as to lead to serious physical disorders has been well demonstrated in this case. As a result of them, her health was shattered and she has been a constant sufferer since 1890. Her principal trouble has been neuralgia of the stomach which was very painful, and exhibited all the symptoms of ordinary neuralgia, nervousness and indigestion. Physicians did her no good whatever. She was discouraged and abandoned all hope of getting well. Finally, however, a certain well known pill was recommended (Dr. Williams' Pink Pills for Pale People).

She supplied herself with a quantity of them and had not taken them two weeks when she noticed a marked improvement

A Constant Sufferer.

In her condition. She continued taking the pills until seven or eight boxes had been consumed and she considered herself entirely cured. She can now eat all kinds of food, which is something she has not been able to do for years. She is not troubled in the least with nervousness as she was during the time of her stomach troubles. She is now well and all because of Dr. Williams' Pink Pills for Pale People a complete cure has been made.

If any one would like to hear more of the details of her suffering and relief gained by the use of Dr. Williams' Pink Pills for Pale People they may be obtained probably by writing the lady direct. She is one of our well known residents, Mrs. Ellen A. Ockerirk, Paw Paw, Ill.

She (after the quarrel)—And must we part forever, Harry? He—Well, at least until tomorrow night, Maud.—Tit-Bits.

Swearing Won't Help It.

Swearing may make a fire burn, or it may make a dock hand lusty, but it won't help Tetters, or Ringworm. If you use Tetterine, it will make you comfortable and save swear words. 50 cents at drug stores, or by mail for 25 cents in stamps from J. T. Shuptrine, Savannah, Ga.

Any fool can lay plans, but it takes a wise man to hatch them out.

No Klondike for Me!

Thus says E. Walters of Raysville, Pa., who grew (sworn to) 252 bushels Salzer's corn per acre. That means 25,200 bushels on 100 acres at 30c a bushel equals \$7,560. That is better than a prospective gold mine. Salzer pays \$400 in gold for best name for his 17-inch corn and out prodigy. You can win. Seed potatoes \$1.50 a bbl. SEND THIS NOTICE AND 10c IN STAMPS TO John A. Salzer Seed Co., LaCrosse, Wis., and get free their seed catalogue, and 11 farm seed samples, including above corn and oats, surely worth \$10, to get a start. A. C. 7
